GLOSSARY OF TERMS

1. Check Sheets	a structured, prepared form for collecting and analyzing data. This is a generic data collection and analysis tool that can be adapted for a wide variety of purposes and is considered one of the seven basic quality tools.
2. Fast-moving spare parts	are Fast-moving spare parts with a high turnover rate and are sold within a short period of time. Due to the fastness in selling the spare parts these are not stored or take space for long.
3. Function Test	An evaluation of the parametric, functional, or timing performance of a component when electrical power is applied
4. Machine buy-off	A process where a maintenance technician, production operator, or equivalent personnel formally accepts a machine after it has undergone setup, line maintenance or repairs, or preventive maintenance. It signifies that the machine is deemed to be on proper working condition and meets the agreed-upon specifications for production use.
5. Process Traveler	The traveler typically includes detailed instructions for each step of the manufacturing process, material specifications, quality control checks, and any special notes related to the production batch
6. Quotation Ledger Form	is a document that a seller provides to a buyer to offer goods or services at a stated price, under specified conditions.
7. Safety Stocks	is an extra quantity of a product which is stored in the warehouse to prevent an out-of-stock situation. It serves as insurance against fluctuations in demand.
8. Tool Life	Useful life of a tool expressed in terms of time from start of its service life until its end of life.

The Technical Education and Skills Development Authority (TESDA) would like to extend thanks and appreciation to the representatives of business, industry, academe and government agencies who provided their time and expertise to the development and validation of this Competency Standards.
